

**Specifications :**

- The LM741 series are general purpose operational amplifiers which feature improved performance over industry. An LM741 operational amplifier is a DC-coupled high gain electronic voltage amplifier. It has only one op-amp inside. An operational amplifier IC is used as a comparator which compares the two signals, the inverting and non-inverting signal. The main function of this IC is to do mathematical operation in various circuits. Op-amps have large gain and usually used as Voltage Amplifier. The LM741 can operate with a single or dual power supply voltage.

Application:

Perform any mathematical operations

- Amplify voltages, Oscillators, Voltage Comparator and many more.

Note: Specifications are subject to change, Photos shown above are Indicative, Actual Product can Vary.
