It can be used along with as a data input generator and also can be used independently as a 8-bit variable TTL data generator. It has a facility to fed external clock (TTL) upto 1 MHz which will be available at the Clock Out socket on the front panel. Otherwise it operates on internal 240 KHz clock.

- Continuous data output (8 bit variable)
- Clock Output
- Compact & Light Weight

Technical Specifications

Output	:	8 bit (variable)
Clock Frequency	:	Internal : 240 KHz, External : upto 1 MHz
Rise Time	:	80 ns approx.
Power Supply	:	220 V ±10 %, 50 Hz / 60 Hz on request
Power consumption	:	2 VA (approx.)

Note: Specifications are subject to change.
