

**Description:**

The reaction turbine model is designed to demonstrate how flowing water can produce rotational movement.

- It is firmly mounted on a sturdy wooden frame, ensuring proper support and balance during operation.
- When water flows through the turbine, it causes the blades to rotate smoothly.
- The wooden frame makes the model stable, easy to place on a table, and convenient for demonstrations.
- This model is mainly used for educational purposes to help students understand the basic concept of water energy conversion.
- The overall structure is compact, neatly arranged, and suitable for classroom or laboratory display.
