

## Overview

Resusci Anne QCPR is a full-body manikin CPR manikin with a Rechargeable battery, designed to represent a standard adult cardiac arrest patient (in terms of required chest compression force). Each Resusci Anne model simulates an adult of average physiology and is designed for realistic training in basic life support techniques following international recommendations. Resusci Anne QCPR comes in a convenient Trolley Bag. Two additional (light and heavy) chest springs are included with the manikin to extend the range of compress force required to compress the chest to guidelines depth, helping trainees more realistically practice compressions as the chest stiffness of patients can vary.
