

**Technical Specifications :**

- The test set is used for determining the water content of bituminous materials.
- The test is based on distilling the sample with a volatile solvent.
- The material to be tested is heated under reflux with a water immiscible solvent, which distills together with the water in the sample.
- Condensed solvent and water are continuously separated in a trap, the water settles in the graduated section of the trap, and the solvent returns to the still.

Note: Specifications are subject to change, Photos shown above are Indicative, Actual Product can Vary.
