

PRODUCT OVERVIEW

The Glass U-Tube Manometer for Blaine is a precision laboratory component designed for use with Blaine Air-Permeability Apparatus for determining the fineness of cement and other powdered materials. The manometer measures pressure differences during air permeability testing, ensuring accurate and reliable results.

The instrument is manufactured from high-quality borosilicate glass, offering excellent chemical resistance, durability, and dimensional stability. The manometer features a uniform internal diameter and clearly marked graduations for precise measurement of the manometric liquid column.

It is designed to be used with Dibutyl Phthalate as the manometric liquid and complies with internationally recognized testing standards used in cement laboratories.

This manometer is widely used in cement testing laboratories, quality control departments, research institutes, and educational laboratories.

Technical Specifications

Parameter	Specification
Product Name	Glass U-Tube Manometer for Blaine
Material	Borosilicate Glass

Note: Specifications are subject to change, Photos shown above are Indicative, Actual Product can Vary.

Export Sales: +91-9829132777
 India Sales: +91-9588842361

IT-2013, Ramchandrapura Industrial Area,
 Sitapura Extension, Jaipur-302022, India.

Parameter	Specification
Internal Diameter	6.0 ± 0.1 mm (Uniform)
Large Bore Diameter	200 mm
Graduation Marks	Clearly visible graduation marks for accurate readings
Compatible Liquid	Suitable for use with Dibutyl Phthalate
Application	Pressure measurement in Blaine Air-Permeability Apparatus
Standards Compliance	ASTM C204 / EN 196-6

Note: Specifications are subject to change, Photos shown above are Indicative, Actual Product can Vary.
