

**Description:**

The impulse turbine model is a small demonstration setup used to show how water energy can be converted into mechanical motion.

- It is mounted securely on a strong wooden frame, which provides stability and easy handling.
- When water is directed onto the turbine wheel, the force of the water makes the wheel rotate.
- The wooden base makes the model portable, durable, and suitable for classroom or laboratory demonstrations.
- It helps students easily understand the basic working principle of water turbines in a practical and visual way.
- The model is compact, neatly assembled, and designed for educational purposes.
