

Key Features

- A Split AC (Air Conditioner) training system refers to a learning tool designed to educate individuals on the principles, components, and operation of split-type air conditioning systems. These systems are commonly used for cooling individual rooms or spaces and consist of an indoor unit (evaporator and fan) and an outdoor unit (compressor and condenser) connected by refrigerant lines.
- **Demonstration of Refrigeration Cycle:**
 - The training system visually demonstrates the refrigeration cycle, including the roles of the compressor, condenser, expansion valve, and evaporator.
- **Component Identification and Function:**
 - This system learn to identify and understand the function of each component in both the indoor and outdoor units.
- **Practical Skills Development:**
 - The system provides hands-on experience with tasks like installation, servicing, and gas charging of split AC systems.
